QIYI WEI

wqy@mails.cuc.edu.cn

Communication University of China

Research Interests

Trustworthy Multimodal Reasoning | Misinformation Verification | Structured Representation Learning

EDUCATION

Communication University of China (CUC) | M.S. in Computer Science and Technology
Sep 2024 – Present | Advisor: Prof. Wenqian Shang | GPA: 3.86/4.00

Communication University of China (CUC) | B.S.
Sep 2020 – Jun 2024

SELECTED RESEARCH EXPERIENCE

Hyper-Verify: Adaptive Hyperbolic Radial-Angular Compatibility Modeling for Multimodal Misinformation Detection

First Author |AAAI 2027 | Move to phrase2

- Studied multimodal misinformation where semantically related content is evidentially incompatible.
- Proposed a specificity-aware hyperbolic radial-angular framework for asymmetric compatibility, achieving state-of-the-art results across four benchmarks.

LAMPEAE: LLM-Augmented Manifold Probing for Adaptive Event Argument Extraction

First Author | EMNLP 2026 Main Conference | Accepted

- Studied structured event reasoning through adaptive role modeling for context-dependent event arguments.
- Developed instance-specific low-rank role probes conditioned on contextual priors from a frozen LLM, achieving state-of-the-art performance on RAMS.

SELECTED PROJECTS

HG23034 | Blockchain-Based Content Trustworthiness Identification | 2023

- Multimodal trustworthiness modeling and provenance analysis for digital-content authenticity and risk identification.

HG26008 | Human-AI Collaborative Interaction Based on Embodied Cognition | 2026–Present

- Multimodal and multi-agent collaborative reasoning, including task decomposition, role assignment, decision fusion, and coordination.

HONORS & LANGUAGE

Honors: University First-Class Graduate Scholarship, Communication University of China (2025)

Language: IELTS 7.0 | CET-6 553 | CET-4 618

RESEARCH DIRECTION

Trustworthy multimodal reasoning for misinformation detection, evidence-aware verification, and structured reasoning, using geometry-aware representations to improve robustness, interpretability, and generalization.
